**ENERMAX Mainstream Power Supply Upgrades**

City of Industry, CA – January 15, 2010

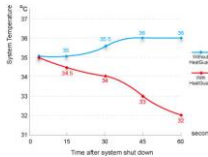

**ENERMAX is proud to announce the update of their running desktop PSU series' in the 400 to 720W range.**

All models of all series have been upgraded with following new features/changes:

**DXXI ready!** The development of ever better performing graphic cards will achieve a new level in 2010 with upcoming models, which require two 8p PCIe connectors per card. This means that current PSU will likely feature a 50-50 mix of simple 6p and 6+2p (8p) PCIe connectors, thus rendering useless of the 6p connectors. To be ready for these cards, your PSU better be like ours, 100% 6+2p (8p)!

**NEW CordGuard**, the patented metal-clip to avoid a loosening of the AC cord over time.

**HeatGuard**, the well-known and industry-leading after-shutdown cooling function, which continues to run the PSU's fan for 30~60 seconds after shut-down. It helps to get the remaining heat out of a system as well as prolong the lifetime of all components.

**NEW Free Fan**, to start the celebrations of ENERMAX' 20-year Anniversary in 2010, a free fan is included in the retail box. It is a special version of ENERMAX' TWISTER Bearing-based MAGMA series with an additional HALO Frame cut-outs to reduce turbulences.
